 Abdulhadi-Yaseen

 AbdulhadiYaseen

 Portfolio

Summary

Computer Science graduate with hands-on experience in full-stack development and AI-integrated applications. Seeking a Software Development role where I can utilize my technical skills, solve real-world problems, and continuously learn and grow within a collaborative environment.

Education

National University of Computer and Emerging Sciences

2022 – 2026

Bachelors in Computer Science

Achievements: Dean's Honour List (Spring 2026)

Skills

Technical Skills: Web Development with AI integration, Retrieval-Augmented Generation (RAG), Task Automation, Web Scraping, Agentic AI & Multi-Agent Orchestration

Languages: JavaScript, C/C++, HTML, CSS, Java, TypeScript

Frameworks and Tools: Next.js, ReactJS, Node.js, Angular, MongoDB, MySQL, Prisma ORM, Model Context Protocol (MCP), Tailwind CSS, Playwright, Selenium, Puppeteer

Experience

10Pearls

Internee Full-Stack Web Developer

March 2025 – May 2025

- Developed and maintained a full-stack web application using React.js, Node.js, and MySQL.
- Implemented robust APIs, integrated logging with Pino, wrote unit tests using Mocha/Chai and Jest, and ensured code quality with SonarQube.

Zehenify

Internee Web Developer

Oct 2024 – Nov 2024

- Gained hands-on experience in developing and optimizing a web application for E-psychiatric consultation using Next.js.
- Collaborated with the team to implement dynamic features, ensuring responsive and efficient user interfaces.

Projects

Enerlytics – AI-Driven Smart Electricity Management System (FYP)

- Developed an AI-powered smart electricity forecasting platform using Next.js, Node.js, and Machine Learning models including Bi-LSTM, TFT, XGBoost, and MLP to predict electricity consumption and optimize billing for Karachi households.
- Built a real-time forecasting and analytics system with web scraping, weather-integrated insights, slab-aware billing predictions, and interactive dashboards, enabling users to monitor usage trends and reduce electricity costs proactively.

Tactical Talk – AI-Powered Football Tactics Platform

- Developed a full-stack Next.js web application using TypeScript, Tailwind CSS, and MongoDB (Mongoose) that delivers real-time tactical football insights.
- Engineered an automated RAG pipeline using Gemini API and Pinecone VectorDB to query 768-dimensional text embeddings, integrating custom transcript scraping for context-aware coaching analysis.

Constructify - Multi-Agent Orchestration Structured Schema Enforcement

- Developed an autonomous multi-agent construction orchestration platform using Next.js, Prisma 7, MySQL to translate unstructured spatial project directives into fully relational, tracking-ready operative footprints.
- Orchestrated a cooperative LLM system using Gemini API (Planner, Risk, Scheduler, and Decision agents) with strict JSON schema enforcement to autonomously synthesize structured execution plans, safety risk factors, and automated logistics directives.

AutoJob – AI-Powered LinkedIn Outreach & Application Automation

- Built an automated LinkedIn application pipeline using Node.js, Puppeteer, and MongoDB featuring daily cron scheduling, login session persistence, and cryptographic MD5 duplicate prevention.
- Integrated OpenRouter API to analyze job postings against resume context, extract recruiter emails, and synthesize personalized cover letters sent via Nodemailer.

AiR Travel - a Flight Booking website

- Designed a comprehensive Flight Management System to streamline operations like flight scheduling, passenger check-ins, and real-time flight status monitoring.
- Built using Node.js, Express.js, MySQL, and Angular. Included features like AngularGuard to protect routes.

Additional Experience & Extra Curricular

Data Structures Student Lab Assistant - FAST-NUCES

August 2025 – Dec 2025

- Assisted students in understanding core Data Structures concepts and applying them effectively during lab sessions.

Director Corporate Affairs at ACM - Developers' Day 2026
